

Name 1: _____

Name 2: _____

Worksheet - Lab 4

For “show us” questions, you ***must*** download the code, zip it, and upload it to the D2L dropbox. However it is preferred if you also show it to the instructor for grading in class if time permits.

1. What was Mark’s problem with his `max` block?
2. Name a few of the input types. Why is it important that we specify input types?
3. Show me your “sum of 2 smallest numbers” block or the “are any equal” block, and explain how you composed functions to write these blocks.
4. Pick one of your solutions to the buggy “sum the numbers between block.” Describe how you identified the problem. Were you able to fix the code? What did you change?
5. Show me your simplified `valid-date` block? Describe how you simplified the code?
6. Why is the check block useful? How does it work?
7. How are global variables different from script variables?
